Ejercicio 1-e

Implementación de una placa nodeMCU esp32-S con dos sensores de presión, el BMP180 y el BMP280. Conexión por I2C. y publicación por MQTT broker mosquito dashboard NODE-RED hosting de IBM BLueMIX

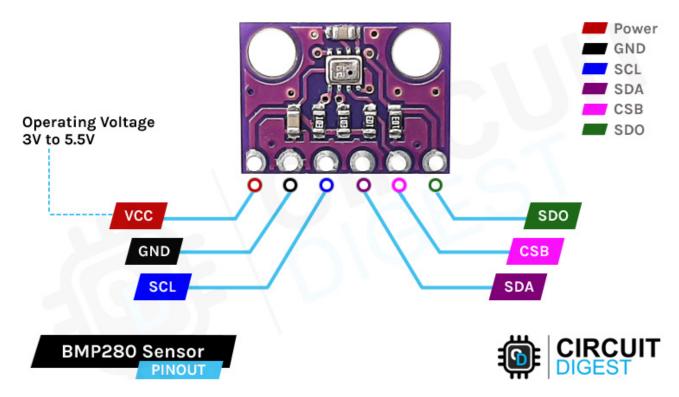

Dashboard on line: https://mgalarmas.mybluemix.net/ui/

Sensor BMP180 Presión

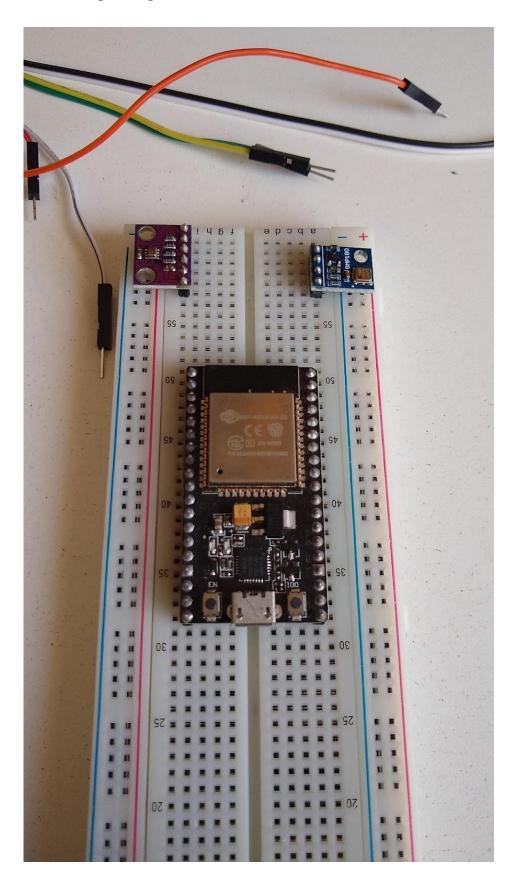

Código para probar el sensor BMP280 y calcular la altitud aproximada.

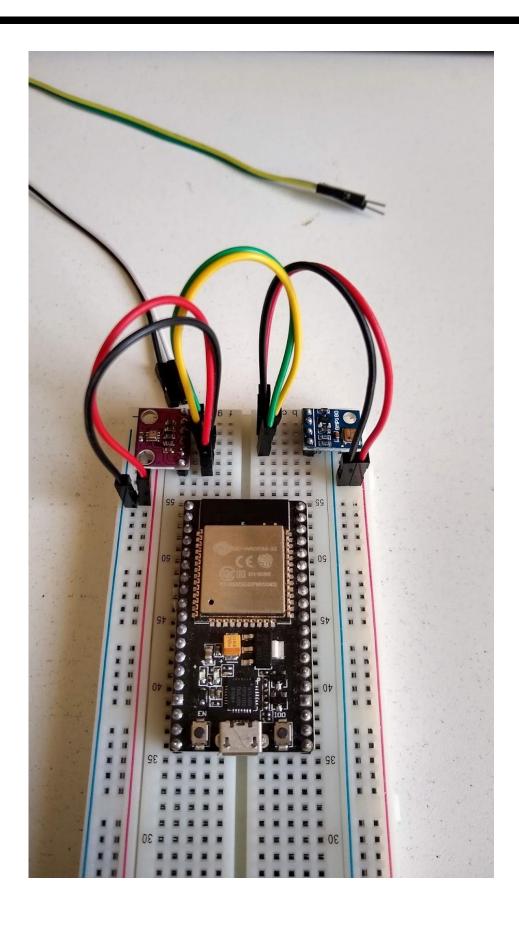

```
Ejercicio 1 - Ejercicio_1-e.ino
3 * Grupo 6
7 void loop()
      Serial.print("Temperatura = ");  // imprimo por serial la palabra temperatura
     Serial.print(bmp.readTemperature());
                                            // recupero del objeto el metodo readTemperatura
                                            // imprimo C de centigrado al final del renglon y hago CR/LF
      Serial.println(" *C");
     Serial.print("Presion = ");
     Serial.print(bmp.readPressure() / 100); // recupero del objeto el metodo readPressure y divido para Hectopascal
      Serial.println(" hPa");
                                            // imprimo Hecto pascal
     Serial.print("Altitud = ");
      Serial.print(bmp.readAltitude(1013.25)); // recupero del objeto el medtodo readAltitud e instancio
      Serial.println(" m");
     Serial.println();
                                    // imprimo CRyLF
      digitalWrite(LED_BUILTIN, HIGH); // Enciendo led azul
      delay(100);
     digitalWrite(LED_BUILTIN, LOW); // apago led azul
      delay(100);
      digitalWrite(LED_BUILTIN, HIGH); // Enciendo led azul
     delay(100);
      digitalWrite(LED_BUILTIN, LOW); // apago led azul
      delay(3000);
```
